VILA RECÔNCAVO

[Class C Families]

165 [217] The civil register for the community of Vila Recôncavo listed 111 deaths for 1950, fifty-one male and sixty female. The age breakdown was as follows:

TABLE 9
NUMBER OF DEATHS BY AGE GROUPS, 1950

under 1 year	36
1- 4	20
5- 9	1
10-14	4
15-19	4
20-29	10
30-39	10
40-49	6
50-59	9
60-69	4
70-79	3
80-89	1
90-99	2
over 99	1
	111

165 164 It is apparent that the first five years are those in which the death rate is highest. According to the local doctor's records, the most frequent causes of these deaths are diarrhea and enteritis (seven deaths), whooping cough (seven deaths), chronic nephritis (five deaths), and acute bronchitis (four deaths). The mal de sete dias (literally, "illness of seven days," an umbilical infection in newly born infants) was the cause of only two deaths, and only one natural abortion was registered, as well as one stillbirth. According to the same doctor, many more adults die of heart trouble and kidney ailments than of anything else.

553 [214] 551 553 The most popular method of naming children is by choosing from an almanac a name which strikes the fancy of the parents. In Brazil many commercial concerns publish yearly almanacs which are widely distributed. In addition to giving national holidays, saints' days, and various other kinds of calendars, they include lists of names, often of saints. While in the upper classes children are named after their parents and grandparents, lower-class families give their offspring all sorts of exotic names chosen from the almanacs, such as Estanislaus, Enoch, or Ignace. Sometimes the name is cho-

Ohum Eniadúdú[1]
Recipes for Afro-Brazilian *Quitutes*[2]
The *Calunga*[3] of the Maracatús
The "People's Library" and the "Modern Collectanea"[4]

Obviously, there is implied in these titles no interest other than in history and ethnology. But in the following ten papers, although there again appears to be no concern with problems of racial accommodation, one does note an awareness of physical differences and an interest in their measurement.

Some Anthropological Measurements of the Population of Recife
Some Data on the Physical Characteristics of the Population of Recife
Some Physical Measurements of Brazilian Negroes and Mulattoes
A Study of Cephalic Indices and Color Variation among Mulattoes in Pernambuco
A Contribution to the Study of Lapicque's Index
Physical Measurements of Negro Students
Comparative Heights and Weights of Newborn *Branco*, *Pardo*, and *Preto* Babies
A Statistical Study of Longevity in *Brancos*, *Pardos*, and *Pretos*
The Comparative Incidence of Tuberculosis in *Pretos* and *Brancos*
Mental Disease among the Negroes of Pernambuco

[776]

[1] Under this title two topics were considered: (1) legends from Dahomey and (2) Anamburucú (an Afro-Brazilian deity [see chap. x]).

[262]

[2] *Quitutes* are food delicacies.

[778]

[3] The *calunga* referred to here was a richly adorned female image representing a water deity. It was carried by the "Dama do Passo," a female dancer of the Maracatú.

[776]

[4] The "Modern Collectanea" and the "People's Library" are two sets of inexpensive leaflets containing ballads and other folklore, historical sketches, anecdotes, prayers, recipes, etc. See, in this connection, Jorge Amado, "Literatura dos negros e mulatos da Bahia," *Revista do Arquivo Municipal de São Paulo*, XLVIII (June, 1938), 179–82.
